INDOOR UNITS VRF SYSTEMS

LG Air Conditioning Technologies

ABOUT LG

About LG Electronics USA

LG Electronics USA, Inc., based in Englewood Cliffs, New Jersey, is the North American subsidiary of LG Electronics, Inc., a \$54 billion global force and technology leader. LG Electronics, named an ENERGY STAR® Partner of the Year for many years, sells a range of stylish and innovative home entertainment products, home appliances, commercial displays, air conditioning systems and solar energy solutions in the United States, all under LG's "Life's Good" marketing theme. For more news and information on LG Electronics, please visit www.LG.com.

LG Electronics USA Air Conditioning Technologies

The LG Electronics USA Air Conditioning Technologies business is based in Alpharetta, Georgia. LG is a leading player in the global air conditioning market, manufacturing both commercial and residential air conditioners and providing total sustainability and building management solutions. From consumer and individual units to industrial and specialized air conditioning systems, LG provides a wide range of products for heating, ventilating and air conditioning. For more information, please visit www.lghvac.com.

ABOUT LG VRF

A Variable Refrigerant Flow (VRF) system is a single refrigerant circuit that connects many indoor units to one outdoor unit. VRF is a superior way to heat and cool any space, providing improved humidity control, individual set points per indoor unit, and a very quiet comfort experience. In the heat recovery configuration, VRF also allows for heating and cooling simultaneously in different zones, further enhancing energy savings and increasing occupant comfort. Energy efficient and easy to design, install, and maintain; a VRF system has low life cycle cost compared to other systems on the market today.

Why LG VRF?

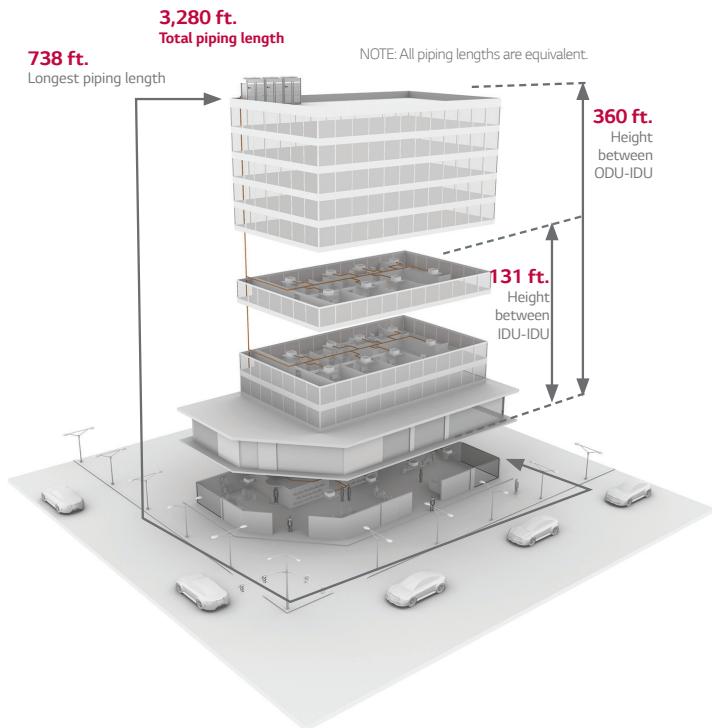

The benefits are numerous: less piping for installers, energy efficiency for owners, and modern indoor units that complement every setting. Sound levels of LG VRF products are among the lowest in the industry, so units can be installed where noise is an issue. Inverter scroll compressors manufactured by LG optimize system energy efficiency.

With the addition of LGRED° heating capability, the Multi V™ 5 provides continuous operational performance with heating down to -22 °F and cooling up to 122 °F for all units with no additional accessories or modifications to the equipment, making it a robust solution for all climates.

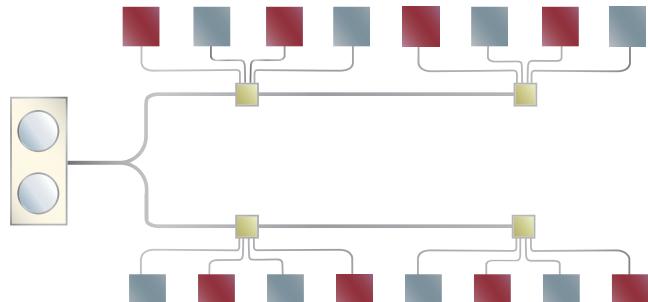

MULTI V™ 5

1. High Elevation Piping Distances

2. Optimized Heat Recovery Piping

- **Flexible piping layout** reduces materials and labor costs during installation
- **LG Heat Recovery Unit (HRU)** is quiet, compact, lightweight, and does not need condensate drains
- **Configured for fully independent heating and cooling**, ensuring occupant comfort

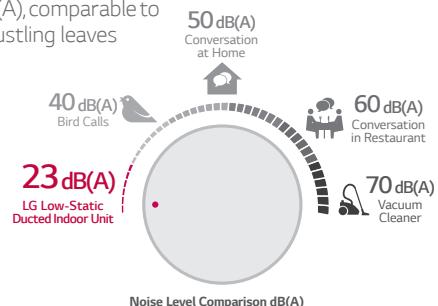

3. Operation Range

- **Industry-leading operation ranges** without additional accessories or performance deficits:
 - Heating: -22 °F to 61 °F WB
 - Cooling: 5 °F to 122 °F DB
 - Simultaneous Operation: 14 °F to 81 °F DB

4. Quiet Operation

- Quiet indoor unit operation down to 23 dB(A), comparable to the sound of rustling leaves

LG VRF ADVANTAGES

Efficiency

Advanced features for superior efficiency:

- **Advanced Smart Load Control**
Automatically adjusts system target pressures based on outdoor temperature and humidity for increased cooling performance.
- **Active Refrigerant Control**
Depending on the operating mode and conditions, the system refrigerant level is automatically adjusted for increased part load and heating efficiency.
- **Variable Path Heat Exchanger**
Depending on the operating mode and conditions, both the refrigerant flow path and velocity are adjusted for improved efficiency.
- **Advanced PCB Cooling**
Improved cooling performance of the inverter PCB by using liquid refrigerant instead of heat sink cooling methods.

- **LG Inverter Scroll**

Innovative high-side-shelf design creates a more compact unit providing the same capacity output, with greater reliability in cold climates.

- **HIPOR™ (High-Pressure Oil Return)**

Oil is returned to the compressor through a separate inlet pipe, ensuring that compressor energy is used to compress refrigerant only.

- **Smart Oil Control**

Eliminates timed oil-return cycles and takes hours off of the time required to return oil compared to systems that use a timed oil-recovery cycle.

- **Intelligent Heating**

By monitoring the outdoor humidity, system target pressures can be reduced to extend heating operation, delay defrost operation and reduce power consumption.

Performance

Expansive operating range in cooling and heating without adding accessories:

- LG Multi V 5 uses vapor injection technology for improved heating performance in ambient conditions as low as -22°F.
- Using a variable path heat exchanger, LG Multi V™ 5 performs in low ambient conditions to provide cooling down to 5°F.

Comfort

- **Quiet Operation**

Multi V indoor units are among the quietest in the industry, with rated sound levels as low as 23dB(A). In addition to temperature, airflow and dehumidification, extremely low sound levels contribute to a relaxing environment.

- **Individualized Zone Control**

Multi V systems allow the user to control the space to the exact temperature desired. This further enhances comfort while promoting reduced power consumption.

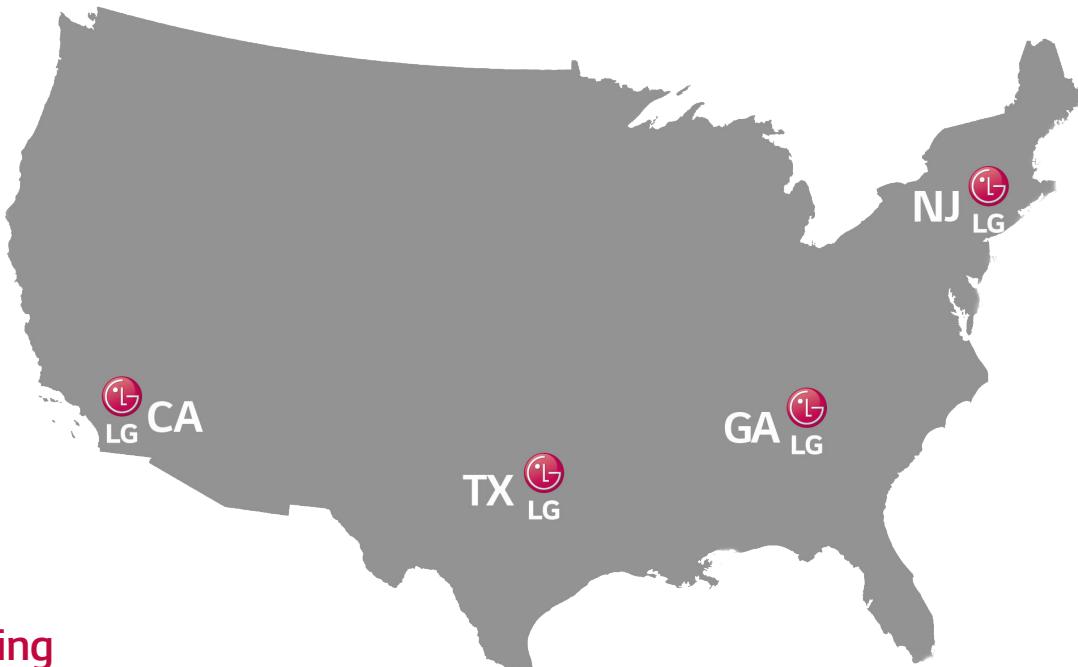

- **Indoor Air Quality**

All Multi V indoor units incorporate a reusable, washable filter. Since distribution and return ducts are not required for this system, dust and duct mold accumulation are reduced, contributing to improved indoor air quality.

Design Flexibility

- **Higher-Elevation Piping Technology**
More floors with fewer systems. LG Multi V™ 5 eliminates the need to invest in extra systems and saves on installation. Enjoy no heating capacity losses due to long pipe length.
- **Compact and Lightweight**
More indoor zones, less outdoor space. When space or access is at a premium, Multi V 5 offers significant cost advantages on large projects.

TRAINING

Training

The LG US Air Conditioning division is headquartered near Atlanta in Alpharetta, Georgia, along with a full training academy. Additional training academies are located in California, Texas and New Jersey. Since 2008, our academies have trained thousands on the advantages of LG air conditioning systems, and even more have been trained through LG's online training modules. World class trainers with years of experience teach classes in duct-free technology, with topics covering everything from installation to service for the full range of LG air conditioning products. LG also has a number of strategically placed training academies throughout the United States that offer a number of LG training classes as well.

For HVAC professionals, LG offers online instruction via our Learning Management System and classroom training at our training academies, strategically placed throughout the country. Training is open to all contractors; ask your LG Electronics authorized distributor for details. For more information and to find out how you can be part of the next training class near you, visit <https://lghvac.com/training>.

Design and Service Tools

As part of our commitment to innovation, LG has developed innovative ways to enhance the service technician's experience during routine maintenance or service with these tools:

- **LG Monitoring View (LGMV)** Software and Mobile App both connect to LG Multi V Systems to allow technicians to troubleshoot accurately and evaluate equipment performance by interfacing directly with the unit. The software provides an accurate picture of an operating system without the need to check system temperatures manually, access the refrigerant circuit for system pressures, or perform time-consuming resistance and voltage tests. This service tool provides the most effective troubleshooting method for LG Multi V equipment.
- **LATS HVAC** is a system design tool for LG Air Conditioning Technologies systems, including Multi V, Multi F, Single Zone, and ERV. Also available to assist with the system design process are an AutoCAD plug-in (LATS CAD) and an Autodesk Revit plug-in (LATS Revit). Using drag and drop functionality, design your LG system quickly and let the system calculate critical details like output capacity and additional refrigerant and confirm pipe lengths are within allowable tolerances. Reach out to your local LG representative for help designing your next system with LATS to save time.

Note :

1. Power input is rated at high speed.
2. Take appropriate actions at the end of HVAC equipment life to recover, recycle, reclaim or destroy R410A refrigerant according to applicable regulations (40 CFR Part 82, Subpart F) under section 608 of CAA.
3. Sound Pressure levels are tested in an anechoic chamber under ISO Standard 3745.
4. All communication cable to be minimum 18 AWG, 2-conductor, stranded, shielded and must comply with applicable and national code.
5. If the temperature rise above 86 °F or the humidity rise above RH 80%, "the dew-protective kit should be equipped or use additional insulation to the indoor unit body."

Accessories

Description	Model
Auxiliary Heat Kit	PRARH1
Wi-Fi Module	PWFMD200

Note:

1. Rated capacity is certified under AHRI Standard 1230. Ratings are subject to change without notice.
Current certified ratings are available at www.ahridirectory.org
2. Max. power input is rated at maximum setting value.
3. Sound pressure levels are tested in an anechoic chamber under ISO Standard 3745.
4. Due to our commitment to continued innovation, some specifications may be changed without notification.

Power Input (Cooling/Heating)		Watts	0.01/0.01	0.01/0.01

1. All capacities are net, with a combination ratio between 95 and 100%.

2. Sound pressure levels are tested in an anechoic chamber under ISO Standard 3745.

3. Water only (no antifreeze).

The combination ratio range for dedicated use (all Hydro Kit units) is 50% - 100%. The combination ratio range for mixed use (Hydro Kit mixed with indoor units) is 50% - 130%.

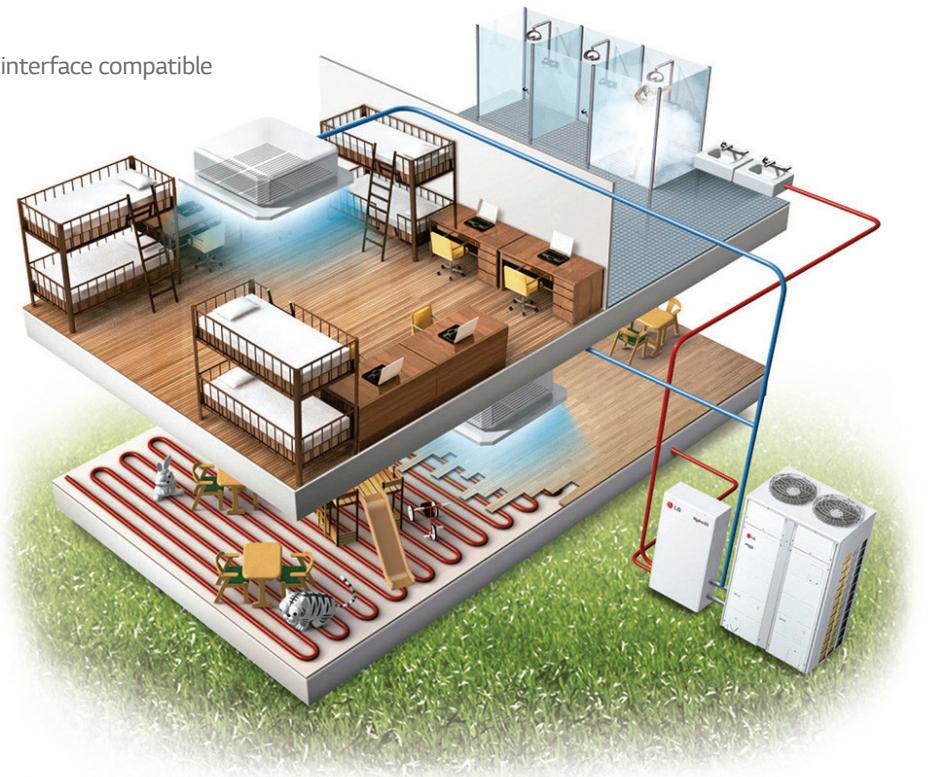

HYDRO KIT

How Hydro Kit Works

The Hydro Kit system uses a refrigerant-to-water heat exchanger to produce chilled or heated water. The Hydro Kit can be used to preheat domestic water stored in an indirect storage tank, snow melt, in-floor or other radiant heating systems. Alternatively, the K4 Hydro Kit can supply chilled or heated water for use with two-pipe fan coils. The LG Hydro Kit may be used with LG Multi V 5, Multi V Water IV, and Multi V S systems.

Features & Benefits

- Provides hot water and floor heating with less energy consumption than a boiler
- No exhaust or exhaust piping required
- Compact and easy to install
- LG Central controller and BMS interface compatible
- Flexible design options

Applications

- Universities
- Offices
- Schools
- Hospitals
- Hotels
- Retail stores
- Restaurants
- Multi-use facilities

EEV: Electronic Expansion Valve Power wiring is field supplied and must comply with the applicable local and national codes.

This unit comes with a dry nitrogen charge. Rated capacity is certified under AHRI Standard 1230. Ratings are subject to change without notice.

Current certified ratings are available at www.ahridirectory.org.

1. Max power input is rated at maximum setting value.

2. Low ambient performance with LGRED® heat technology is included in Multi V 5 Air Source Units produced after February 2019.

3. Take appropriate actions at the end of HVAC equipment life to recover, recycle, reclaim or destroy R410A refrigerant according to applicable regulations (40 CFR Part 82, Subpart F) under section 608 of CAA.

4. Sound Pressure levels are tested in an anechoic chamber under ISO Standard 3745.

5. All communication cable to be minimum 18 AWG, 2-conductor, twisted, stranded, shielded and must comply with applicable local and national codes. Ensure the communication cable is properly grounded at the main outdoor unit only. Do not ground the ODU-IDU communication cable at any other point.
