

**Air Conditioning
Technologies**

Why LG?

**Efficiency, beautiful design,
and personal control**

EFFICIENCY

Higher standards for better economics.

LG HVAC has systems that are proudly ENERGY STAR® certified and go hand in hand with delivering some of the industry's best efficiency. Our innovative LG inverter variable-speed outdoor units are measurably quieter and use less energy than conventional air conditioners. And come purchase time, local and regional rebates up to \$2500 can help reduce upfront costs.

DESIGN

Looks as great as it runs.

Only LG can turn an air conditioning system into a work of art. With the award-winning design of the ArtCool™ Gallery, you can customize your indoor unit with a framed image of your choice. And our ArtCool™ Mirror duct-free unit gives you a modern, polished look that accents your contemporary lifestyle. Of course, we also work well with ducted installations if that's your thing.

CONTROL

Any temperature. Any room. Any time.

To enhance your way of life, you look for the convenience of connectivity with the rest of the LG electronics in your home. This is where LG really offers an advantage. Homeowners know us for our leading-edge home appliances and electronics. Now, our ThinQ™ app makes for a simple and seamless smart home operation. This gives your family the freedom to control the comfort of each individual area of the home without sacrificing efficiency. You can also connect to both Amazon Alexa and Google Assistant™ for voice-activated comfort and convenience.

FLEXIBILITY

Plays well with your plans.

LG has a variety of systems that are compatible with your design plans for your retrofit, remodel or brand new construction. From ducted to duct-free, and even a hybrid of both, LG is unlike conventional HVAC systems by offering you the flexibility and freedom modern projects demand. We have the options to make your home a haven.

FUTURE FOCUSED

Less energy. More comfort.

Our innovative R1 scroll compressor is the key to keeping your room at the temperature you want. The compressor is designed for enhanced performance with both a higher output and wider operating range than standard systems. Additionally, the R1 scroll compressor provides intuitive run cycles allowing for more consistent humidity and setpoint temperature.
